EDUCATION

Bachelor of Applied Science in Applied Data Science (D4) 08/2024 – 2028
Politeknik Elektronika Negeri Surabaya (PENS) Surabaya, Indonesia
GPA: 3.63 / 4.00

TECHNICAL SKILLS

Programming Languages
Python, SQL

Developer Tools & Cloud
Git, GitHub, Docker Compose, Postman, Vercel, Render, VS Code

Machine Learning & AI
Scikit-Learn, PyTorch, OpenAI CLIP, FAISS Vector Search, Amazon Chronos-Bolt, Google Gemini API

Data Engineering & Backend
PostgreSQL, Supabase, APScheduler, REST APIs, Real-time Data Pipelines, Web Scraping

Libraries & Frameworks
OpenCV, Pandas, NumPy, Flask, FastAPI

PROJECTS

REGOKEMON 09/2026 – Present
Pokémon TCG Condition & Valuation Analytics Tool
Python, OpenCLIP, FAISS, PyTorch, Supabase, FastAPI
- Engineered a visual retrieval engine via OpenAI CLIP and FAISS across 20,617 cards, achieving ~18 ms GPU latency (RTX 2050) and 30+ FPS live HUD.
- Developed adaptive preprocessing (low-light gamma LUT, motion deblurring), 4-way auto-orientation, and Top-8 ORB caching with 93.8% accuracy.
- Integrated Amazon Chronos-Bolt Mini for 7-day probabilistic price forecasting (P10/P50/P90) and automated daily Supabase ingestion via cron.

Web-ISPU 04/2026 – 06/2026
East Java Air Quality Forecasting System
Python, APScheduler, Supabase, Vanilla JavaScript
- Built an automated unattended ETL pipeline using APScheduler to poll hourly meteorological data across 38 cities with 99.9% uptime.
- Optimized PostgreSQL query performance and connection pooling, resolving UTC+7 timezone discrepancies and eliminating connection drops.
- Designed stateless REST APIs serving structured multi-pollutant metrics and historical time-series data to an interactive web dashboard.

ELYSIA 09/2026 – 10/2026
Conversational AI Video Game Recommender
Python, Google Gemini, Flask, Render
- Architected a 6-tier cascading LLM failover system across Google Gemini candidate models to eliminate HTTP 429 quota errors and guarantee uptime.
- Developed a two-stage retrieval pipeline filtering 24,000+ games in <50 ms, followed by neural semantic re-ranking and real-time SSE streaming.
- Designed multi-turn conversational session tracking with dynamic playstyle vector accumulation for adaptive personalized recommendations.

VibePlay 05/2026 – 06/2026
Interactive Game Recommendation Marketplace
Python, Scikit-Learn, Pandas, APIs, Vercel
- Built a fault-tolerant web scraper with automatic checkpointing to bypass rate-limits, curating a dataset of 24,080 games with Steam pricing.
- Developed a hybrid recommendation engine combining Jaccard similarity with interactive radar charts for playstyle profiling.
- Engineered automated sanitization pipelines using regex to filter explicit content and normalize localized Steam IDR pricing.

LEADERSHIP & INVOLVEMENT

HIMIT PENS 06/2026
Head of Operations Division Surabaya, Indonesia
HIMITOPIA 2026
- Directed operational logistics, stage technical infrastructure, and cross-team resource management for a 300+ attendee annual festival with zero downtime.

BPA & HIMIT PENS 10/2025 – 03/2026
Student Election Committee Member Surabaya, Indonesia
KPU Suksesi HIMIT 2025
- Formulated committee operational guidelines and oversaw transparent e-voting governance for 600+ student constituents, securing a 100% dispute-free election.
