🎓 EDUCATION

Bachelor of Applied Science in Applied Data Science (D4)
Politeknik Elektronika Negeri Surabaya (PENS)
GPA: 3.63 / 4.00

06/2024 – Present
Surabaya, Indonesia

🧠 TECHNICAL SKILLS

Programming Languages
Python, SQL

Data Engineering & Backend
PostgreSQL, Supabase, APScheduler, REST APIs, Real-time Data
Pipelines, Web Scraping

Developer Tools & Cloud
Git, GitHub, Postman, Vercel, Render, VS Code

Machine Learning & AI
Scikit-Learn, PyTorch, OpenAI CLIP (ViT-B-32), FAISS Vector Search,
Google Gemini API, Prompt Engineering

Libraries & Frameworks
OpenCV, Pandas, NumPy, Flask, FastAPI

📁 PROJECTS

REGOKEMON 🔗 **09/2026 – Present**
Pokémon TCG Condition & Valuation Analytics Tool
Python, OpenCLIP, FAISS, OpenCV, Supabase

- Engineered a multimodal visual retrieval engine using OpenAI CLIP and FAISS, enabling card search across 20,400+ embeddings in <200 ms.
- Implemented dual-input processing for uploaded images and real-time webcam streams with local CUDA GPU acceleration.
- Integrated OpenCV feature re-ranking for holo-cards and built automated GitHub Actions pipelines syncing daily price data into Supabase.

ELYSIA 🔗 **09/2026**
Conversational AI Video Game Recommender
Python, Google Gemini, Flask, Render

- Architected a cascading LLM failover system across multiple Gemini models to eliminate HTTP 429 quota errors and guarantee uptime.
- Developed a two-stage retrieval pipeline filtering 24,000+ games in <50 ms, followed by neural semantic re-ranking and real-time SSE streaming.
- Designed multi-turn conversational session tracking with dynamic playstyle vector accumulation for adaptive personalized recommendations.

VibePlay 🔗 **05/2026 – 06/2026**
Interactive Game Recommendation Marketplace
Python, Scikit-Learn, Pandas, APIs, Vercel

- Built a fault-tolerant web scraper with automatic checkpointing to bypass rate-limits, curating a dataset of 24,000+ games.
- Developed a hybrid recommendation engine combining Jaccard similarity with interactive radar charts for playstyle profiling.
- Engineered automated sanitization pipelines to clean dirty metadata and normalize localized Steam IDR pricing.

Sistem Prediksi ISPU 🔗 **04/2026 – 06/2026**
East Java Air Quality Forecasting System
Python, APScheduler, Supabase, Vanilla JavaScript

- Built an automated unattended ETL pipeline using APScheduler to poll hourly meteorological data across 38 cities with 99.9% uptime.
- Optimized PostgreSQL query performance and connection pooling, resolving UTC+7 timezone discrepancies and eliminating connection drops.
- Designed stateless REST APIs serving structured multi-pollutant metrics and historical time-series data to an interactive web dashboard.

🏠 LEADERSHIP & INVOLVEMENT

BPH HIMIT DAGRI PENS **06/2026**
Head of Operations Division
HIMITOPIA 2026
Surabaya, Indonesia

- Directed operational logistics, stage technical infrastructure, and cross-team resource management for a 300+ attendee annual festival with zero downtime.

BPA HIMIT PENS **10/2025 – 03/2026**
Student Election Committee Member
KPU Sukses HIMIT 2025
Surabaya, Indonesia

- Formulated committee operational guidelines and oversaw transparent e-voting governance for 600+ student constituents, securing a 100% dispute-free election.
